

**Ativus™ PK** is a versatile nutrition solution designed to meet the need of many crops at all points of the nutrient-demand curve throughout the growing season. By delivering highly available phosphorus for early development and readily absorbed potassium to support crop quality — **Ativus PK** is a flexible tool in a grower’s nutritional toolbox that meets the yield and quality goals of the most demanding growers.

### FEATURES

- Unique C<sup>2</sup> formulation maximizes phosphorus and potassium availability for superior uptake in the plant
- Designed to optimize leaf penetration for fast uptake
- Formulated to provide season-long availability of nutrition in a highly compatible formulation that fits many applications

### GROWER BENEFITS

- C<sup>2</sup> formulation maximizes nutrient availability and mobility to drive yield and quality
- Contains 20% readily available phosphate and 15% soluble potash to support season-long growth and vigor
- Enhances buffering capacity to moderate the effect of salts in a foliar fertility blend

### RATES

2-8 qt/A for most crops and applications

### ANALYSIS

2-20-15 with C<sup>2</sup> Technology

#### What is C<sup>2</sup> Technology?

C<sup>2</sup> is a proprietary technology consisting of extracted carbon and carbohydrate reacted with nutrients for improved soil health and plant performance.

**Carbon:** Increases nutrient availability by fostering growth of beneficial soil microbes and positively impacting soil attributes creating better holding capacity for nutrients and water

**Carbohydrate:** Improves nutrient uptake and availability in both soil and foliar applications.
