GENERAL INFORMATION

BOROSOL 10 is an effective readily available source of boron for soil and foliar applications to plants. It may be applied in water or mixed with most liquid fertilizers, micronutrients, or pesticides.

FOLIAR APPLICATIONS

Apply with enough carrier to thoroughly cover all foliage. Early morning or late evening applications give the best results. Boron is not easily translocated within the plant, therefore multiple foliar applications at low rates during the

growing season are most effective.

SOIL APPLICATIONS

Apply with sufficient carrier to give complete coverage. Soil applied boron must be moved into the root zone to be absorbed by the plant. This can be accomplished by irrigation, rainfall, or tillage.

COMPATIBILITY

BOROSOL 10 is compatible with many liquid fertilizers, micronutrients, and pesticides. Addition of BOROSOL 10 to these products should not be done without first testing compatibility on a small scale.

When mixing with pesticides, dilute BOROSOL 10 with water prior to the addition of buffering agents and pesticides.

Follow all directions and precautions on pesticide labels prior to mixing with BOROSOL 10.

PRECAUTIONS

WARNING: Overapplication or excessive use of boron, or use on crops other than those listed, can result in boron toxicity. This may cause foliar damage or serious crop injury.

The proper use of soil test recommendations will minimize the risk of overapplication of boron.

Do not use BOROSOL 10 in soil applications where it will directly contact the seed. In foliar uses, use at least one (1.0) gallon of water for each pint of BOROSOL 10 applied to the crop.

DRIP IRRIGATION

The required amount of this product should be applied over the growing season with multiple applications 1 to 2 weeks apart.

AIR APPLICATION

Normal aerial application is 1.0 quart of this product per 5.0 gallons of water per acre per application.
