

Prologue® is designed to benefit growers focused on early season applications of phosphate and zinc. The unique combination of components in Prologue are engineered to increase the efficiency of existing and applied phosphate for a higher-performing and more sustainable approach to early season nutrition.

FEATURES

- Built with Acetate and Nutrient Solubilization Technology
- Provides two unique nutrient solubilization processes for more nutrition into your crop
- Engineered to affect existing and soil-applied phosphate

GROWER BENEFITS

- Designed for early season applications or coming out of dormancy for permanent crops to support key phosphorus and zinc needs
- Optimized to promote chemical and biological availability of phosphate
- Highly available zinc with acetate complex supports key early season functions

RATES

3-6 pt/A for most crops and applications

ANALYSIS
